

# True Business Continuity at a Price You Can't Afford to Miss

## Active Disaster Recovery and Failover in the Cloud

### OVERVIEW

Business Continuity is critical to your organization, but all too often you still experience the inevitable downtime associated with server failure in production. Traditional disaster recovery solutions are expensive, and offer no value beyond storage. Multi-site failover requiring redundant datacenters are expensive, adding cost, complexity and overhead to your business. Unfortunately, downtime is worse.

Evolve Technologies is now offering a cloud-based managed service that provides a replicated copy of your production infrastructure in the cloud. This new service platform will eliminate downtime and business risk with Active Disaster Recovery and Failover in the Cloud, giving you True Business Continuity at a price you can easily afford.

### BENEFITS INCLUDE

- Secure offsite storage and disaster recovery
- Fail-over and run from the cloud in minutes
- Eliminate downtime and lower business risk
- Ensure employee productivity in case of outage
- Have servers tested, patched and upgraded
- Improve the quality and efficiency of your IT

Get enterprise business continuity at SMB costs

### HOW IT WORKS

With a simple installation of an agent in your production environment, your production server is replicated to a secure datacenter in the cloud. On regularly scheduled intervals, changes to your production servers are compressed, encrypted and automatically uploaded to the cloud. In the event of outage to production, we can have you up and running in a matter of minutes. Once it's fixed, we can download the most recent copy of server to production.

Because a production-ready image of your production server is maintained in the cloud at all times, we can also perform system tests and upgrades, ensuring faster, higher quality server deployments and backups that are accurate and easily restorable for use at any time.

### PREDICTABLE COST AND SAVINGS

A managed service that requires no software or hardware investment, our managed service delivers predictable costs and savings with you a better return on investment. Not only can we ensure continual uptime, but having a replica of your server in the cloud enables us to work on your server anytime without disturbing your office environment or making a special trip, lowering your expenses and improving the quality and efficiency of our service. We can also test patches and perform upgrades in a fraction of the time it took previously, and without ever touching your production environment! This saves not only time and money, but ensures that you have a level of business continuity normally only available to the enterprise.

**Try it today! Ensuring your business continuity  
as never been so reliable, affordable and safe!**
